Kalydeco (ivacaftor) is indicated for patients aged 2 and older who have one mutation in the Cystic Fibrosis Transmembrane Conductance Regulator (CFTR) gene that is responsive to drug treatment based on clinical and/or in vitro (laboratory) data.

Symdeko (tezacaftor/ivacaftor) is indicated for the treatment of patients with CF aged 12 years and older, who are homozygous for the F508del mutation, which causes the production of an abnormal protein that disrupts how water and chloride are transported in the body, or who have at least one mutation in the CFTR gene that is responsive to tezacaftor/ivacaftor based on in vitro data and/or clinical evidence.

Effective May 1, 2018, the updated Cystic Fibrosis PA Request Form must be used to request a PA for Orkambi, Kalydeco and Symdeko. The updated form replaces the Orkambi PA request form currently being used for Orkambi.
