The Medicaid Promoting Interoperability Program:

Understanding the Security Risk Analysis

A security risk analysis (SRA) should be an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic protected health information held by the organization.

The Promoting Interoperability (PI) Program will be hosting an information session on how to conduct a security risk analysis to meet the PI Program's Protect Electronic Health Information objective. Eligible Professionals and Hospitals will experience an in-depth review of an SRA, including the required elements, timelines, and the PI Program's attestation review process.

The Information session will be held via Webex.

Understanding the Security Risk Analysis

Thursday, June 27, 2019

11:00 a.m. Eastern Daylight Time 1 hour

Meeting Number: 643 743 397

Conference Line: 1-844-740-1264

Attendee Code: 93584456

Please use the call information above to join the meeting.
